

Supplementary Table 1. Predefined Variables for Article Inclusion

Clinical characteristic	In-hospital data	Procedural data	Follow-up data
No. of patients with CD or UC	Overall complications	Use of general anesthesia	Duration of follow-up
Associated disease and sample size	Major complications	Preoperative steroids	Need for late surgical conversion
Age	Minor complications	Surgery style	Late complications
BMI	Procedure-related complications	Procedural success	30-Day mortality
Sex	Length of intensive care unit stay	Emergent surgical conversion	Overall late mortality during follow-up
Region	Length of hospital stay	Procedure time	Intestine-related late mortality
Diagnosis time	Overall in-hospital mortality	Blood loss volume	Non-intestine related late mortality
Medical comorbidities	Intestine-related late mortality	Time to flatus	Recurrence of CD or UC requiring operation
Smoking	Non-intestine related late mortality	Time to bowel movement	Small bowel obstruction
Severity	Wound infection	Return to solid diet	Incisional hernia
Phase of IBD	Urinary tract infections	Resection segment position	Medical treatment of remission
Site of colitis	Respiratory complications		
Duration of illness before surgery	Peritonitis		
Weight loss	Anastomotic leak		
Urban residence	Abdominal abscess		
Extraintestinal manifestation	Bowel obstruction or prolonged ileus		
Blood in stool	Reoperation for any reason <30 days		
Fever			
Perianal disease			
Anti-TB therapy			
Behavior (bloody/stricturing/penetrating)			

TB, tuberculosis.
